ABOUT US

Know each student better. Support them together.

01

outcomly brings interactive learning, assessment, student support and everyday school management into one platform. Lesson objectives guide explanation, exploration and practice. Assessment results inform targeted learning plans, and observations inform counselling follow-up. Teachers, leaders and counsellors can work together, with families involved in understanding each student's needs and supporting their progress.

Learning → Assessment → Support → Follow-up

> We believe information matters when it leads to action: an explanation that makes an idea clear, practice that addresses a difficulty, an intervention that supports a student, or a decision that helps a team work together. We build outcomly to turn understanding into clear next steps, with the means to follow them through.

Different roles. A shared focus on the student.

Students have a clear path for learning and practice. Teachers have tools to plan, teach and assess. Leaders can organise daily work, while counsellors keep structured case records and track follow-up. Reports, meetings and recorded communication with parents and guardians bring school and family efforts together, with clear responsibilities and a shared commitment to each student's progress.

Our vision

Schools that understand how their students learn and what they need, and work together to help them progress.

Our mission

To connect learning and assessment with academic support, counselling and family partnership, giving schools practical tools to manage their time, decisions and daily follow-up.

ABOUT US / INTERACTIVE LEARNING

From clear explanations to the joy of discovery.

Students begin with an idea and its examples, then explore, apply, practise and check their understanding. Feedback and chances to try again help them learn from mistakes and revisit explanations. Each stage builds on the last, so students know what they are learning and how to move forward.

Science labs that turn ideas into experiments

In lessons with interactive science labs, students predict outcomes, carry out experiments, observe changes and record conclusions. Simulations help teachers make concepts tangible through observation, inquiry and discussion.

Videos that prompt thinking. Games that build understanding.

In some interactive lessons, videos pause for students to answer questions before the explanation continues. Educational games, discovery activities, classification tasks and exercises in ordering solution steps offer ways to apply ideas, try again and review model answers. Each experience serves the subject and lesson objective, encouraging students to take an active part in their learning.

The right approach for each learning goal

outcomly supports lesson planning through inquiry, collaborative learning and explicit instruction. Teachers choose what suits their students and objectives. Worked examples, concept organisers and activities that ask students to find and correct errors and explain their answers bring teaching, practice, reasoning and assessment together.

Understand their needs. Shape their support.

From assessment results to targeted learning plans

Performance reports highlight strengths and help identify objectives and skills that need attention. Targeted learning plans match these needs with resources, practice and follow-up, with review and approval by authorised school staff.

These plans give teams a shared basis for providing support and tracking progress. Assessment becomes part of an ongoing process: understand what a student has learned, choose the support they need, review its effect and decide what comes next.

Counselling that sees the whole school experience

Understanding a student means considering their behaviour, attendance and experience of school. outcomly provides a structured process for referrals to counsellors, recording facts and observations, assessing cases, and documenting actions and follow-up dates.

Case management tools help counsellors plan student support, address behaviour, record communication with parents and guardians, and follow up with school teams. Initial referral guidance draws on the Jordanian Ministry of Education's 2024 Student Discipline Instructions. Case assessment and approval of action remain with qualified professionals and authorised staff.

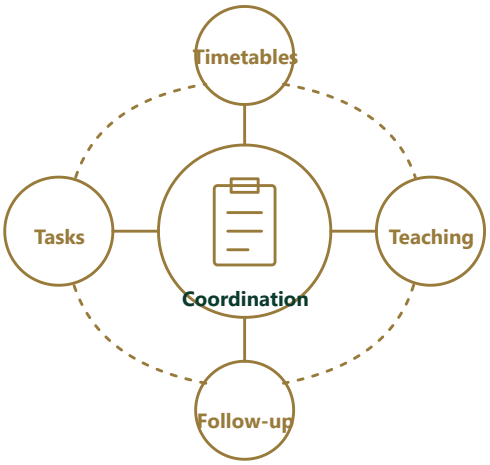

A fuller picture for professional judgement

Reports bring together available academic information, attendance, teacher observations, behaviour records and previous interventions. Counsellors can better understand the context, clarify missing information, choose an appropriate intervention and review its effect. Decisions remain grounded in the available evidence and professional judgement.

Clearer school management. More time for learning.

School leaders need to know what is happening and have practical ways to organise the work. outcomly brings together grades, classes, teaching assignments, timetables, attendance, tasks and reports, alongside academic and counselling follow-up.

Having this information together helps teams spend less time gathering records and chasing updates across different channels. Leaders can see who is responsible, how work is progressing and what needs attention, leaving more time for planning, support and improvement.

A shared foundation. Flexibility for your school.

Every school has its own priorities and ways of working. outcomly lets schools adapt grades, subjects, learning objectives, content, timetables, staff roles, permissions and document templates. Schools can also set learning task content and instructions, and track tasks within their areas of responsibility.

Schools start from a shared foundation and tailor the areas they manage. Access to information and tools reflects each person's role and permissions, helping staff understand their responsibilities and work together.

What guides our work

01

Students come first

We design around students' learning, progress and needs at school.

02

Professional judgement leads

Technology supports teachers, counsellors and leaders. Review and approval stay with those responsible.

03

Quality is in the details

From a well-worded question and its learning objective to an accurate observation and a clear next step.

04

Clear responsibilities support teamwork

Defined roles and permissions help everyone access what they need to do their work.

outcomly. Understanding students. Bringing support together.
